SUMMARY

Quality Assurance Engineer experienced in ensuring software quality across web-based systems throughout the software development lifecycle. Skilled in manual testing, functional and regression testing, API testing, test case design and execution, defect tracking, requirements analysis, SRS review, and UAT support. Proven ability to collaborate with cross-functional teams, validate business and functional requirements, identify critical defects, and support the delivery of reliable, high-quality software solutions.

EXPERIENCE

Quality Assurance Engineer

Seagull Technology

December 2025 – Present, Amman, Jordan

- Perform end-to-end testing of web-based systems, including functional, regression, integration, smoke, and exploratory testing to ensure software quality and compliance with business requirements.
- Design and execute test scenarios and test cases, document defects with clear reproduction steps and supporting evidence, and perform retesting and regression testing to verify fixes across releases.
- Conduct API testing using Postman, validating requests, responses, status codes, business rules, data accuracy, and frontend-backend integration.
- Review and validate Software Requirements Specification (SRS) documents against system behavior, identify requirement gaps and inconsistencies, and support UAT, client feedback, and external testing cycles through issue analysis and fix verification.
- Collaborate with frontend and backend developers, project managers, and stakeholders while testing complex role-based workflows, permissions, dashboards, financial processes, payment flows, notifications, and integrations to support release readiness.

Freelance QA Tester

uTest

April 2025 – Present

- Participate in real-world testing cycles for web and mobile applications, performing functional, usability, and exploratory testing, documenting defects, and validating fixes.
- Tested products across e-commerce, streaming, and mobile banking domains.

Quality Assurance

AppTrainers - Internship

December 2024 – June 2025, Amman, Jordan

- Developed practical QA experience in test case design and execution, defect reporting using JIRA, and functional, smoke, regression, confirmation, and API testing using Postman.
- Gained exposure to Fiddler, Selenium, Appium, and JMeter while applying SDLC/STLC principles across manual and automated testing activities.

PROJECTS

Future Station – Ministry of Digital Economy and Entrepreneurship (MoDEE)

- Performed end-to-end functional, regression, API, and integration testing across key modules, including training courses, workshops, consultations, financial operations, payment flows, dashboards, and complex role-based workflows.
- Reviewed and validated business requirements and SRS documentation against system implementation, identified functional gaps and inconsistencies, and verified fixes through retesting and regression testing.
- Supported UAT and external testing cycles by analyzing reported findings, validating issues, following up on fixes, and verifying system readiness for delivery.
- Collaborated directly with the client through meetings and ongoing communication to discuss requirements, clarify business needs, review feedback, follow up on reported issues, and ensure alignment between the implemented system and client expectations.

King Abdullah II Center for Excellence (KACE) System

- Performed quality assurance and functional testing, validating system workflows and business requirements, identifying and documenting defects, verifying fixes, and conducting regression testing to ensure system stability and expected functionality.

EDUCATION

Bachelor's of Software Engineering

Hashemite University • Jordan - Zarqa • 2024

CERTIFICATIONS

ISTQB® Certified Tester Foundation Level (CTFL 4.0)

JOSTQB • 2024 | [Verify Credential](#)

SKILLS

Soft Skills: Client Communication, Cross-functional Collaboration, Analytical Thinking, Attention to Detail, Problem Solving, Time Management.

Technical Skills: Manual Testing, Functional Testing, Regression Testing, Smoke Testing, Exploratory Testing, Integration Testing, End-to-End Testing, API Testing (Postman), Test Case & Test Scenario Design, Defect Reporting & Tracking, Requirements Analysis, SRS Review & Validation, UAT Support, SDLC & STLC, JIRA, ClickUp.

Languages: Arabic (**Fluent**), English (**Good**)
